Tarrant Nephrology

Christopher Boshkos, MD
Medical Director, Kidney Transplant
CareDx

Exhibitor Spotlight: Surveillance Tools and Molecular Innovation for Transplant Patients

Different molecular tools such as AlloSure Kidney and digital tools can help you manage patients throughout their transplant journeys.

Join us to learn how the landmark ADMIRAL study clinically validates the use of AlloSure Kidney for early and accurate detection of allograft injury and more about how CareDx can support patients throughout their transplant journeys with pre, peri, and post-transplant solutions.

These include solutions to streamline the transplant waitlisting process for both Centers and Community Practices; remote patient monitoring solutions; molecular tools that identify allograft injury and rejection early; and solutions that help patients with medication adherence and appointment scheduling.
