

ROLE OF CD38+ CELLS IN IMMUNE-MEDIATED KIDNEY DISEASE

Please join us to discuss new insights into the role of CD38+ immune cells—including plasmablasts, plasma cells, and NK cells—in the pathogenesis of immune-mediated kidney diseases. The discussion will focus on the role of CD38+ cells in the disease mechanisms and potential therapeutic strategies in antibody-mediated rejection (AMR), IgA nephropathy (IgAN), and primary membranous nephropathy (PMN) and will include emerging data from recent and ongoing studies.

American Society of Nephrology (ASN) Kidney Week 2025
Exhibitor Spotlight

Saturday, November 8, 2025 (12:00 PM - 12:45 PM)

Theater 1, Exhibit Hall D

George R. Brown Convention Center, Houston, TX
