

March 17, 2016

The Honorable Tom Cole  
Chairman  
Appropriations Subcommittee on Labor,  
Health and Human Services, Education  
and Related Agencies  
U.S. House of Representatives  
Washington, DC 20515

The Honorable Rosa DeLauro  
Ranking Member  
Appropriations Subcommittee on Labor,  
Health and Human Services, Education  
and Related Agencies  
U.S. House of Representatives  
Washington, DC 20515

Dear Chairman Cole and Ranking Member DeLauro:

Millions of Americans experience disparities in health status and health care quality, including racial and ethnic minority groups, rural populations, low-income populations, and other groups. The National Institute on Minority Health and Health Disparities (NIMHD) serves as the lead scientific agency dedicated to improving minority health and reducing health disparities through conducting and supporting research. NIMHD's work aims to document the root causes of health disparities, to identify effective interventions to decrease those disparities, and to train a diverse research workforce.

As you draft the Labor, Health and Human Services, Education and Related Agencies (Labor-HHS) appropriations legislation for fiscal year (FY) 2017, **the undersigned members of the Friends of NIMHD respectfully request \$302 million for NIMHD** – an increase of \$21 million over the FY 2016 level and the president's budget request.

The Friends of NIMHD appreciate the Subcommittee's support for the Institute and for the continued strong support of the National Institutes of Health (NIH). NIMHD is uniquely positioned to identify the causes of poor health among minority populations, as well as develop and test interventions to reduce and eliminate health disparities and improve minority health. To date, studies supported by the Institute's research programs have generated important evidence about the contributing factors in health disparities including biological, environmental, behavioral, and societal factors; produced effective interventions for combatting these disparities; and provided leadership within NIH to diversify both the research workforce and the data sets that are used for NIH research – a critical step in ensuring that the research enterprise is working to address the health needs of all Americans. Specifically, NIMHD has seen success in:

- **Basic Research:** The basic research at NIMHD focuses primarily on identifying biomedical causes of disparities and how these factors interact with social determinants in health care. Recently, a NIMHD-funded study identified a cohort of molecules associated with the progression to advanced prostate cancer disease that may explain the higher rate of mortality from the disease in African American men.

- **Community-Based, Participatory Research:** Through a collaborative effort with the Suquamish tribe and Port Gamble S’Klallam tribe, researchers from the University of Washington were able to develop a socially appropriate intervention strategy to prevent substance abuse among American Indian youth. This work was effective in reducing substance abuse and in increasing cultural identity, cultural practices, hope, and self-efficacy among these youth.
- **Transdisciplinary and Translational Research:** NIMHD supports translational research in an effort to better understand the roots of health disparities. For example, data show that there is a disparity among Hispanic/Latino groups and the incidence of childhood asthma and morbidity rates. To determine if this disparity was caused by ancestry or other factors, NIMHD funded a study examining genome-wide data. This research found that when all other variables are controlled, the likelihood of childhood asthma and childhood deaths from asthma is correlated with whether the groups’ ancestry included African lineage.
- **Training the Research Workforce:** NIMHD supports education, training, and outreach programs to expand the knowledge base of research on minority health and health disparities. Two examples are the Translational Health Disparities Course, a two-week intensive course on integrating principles of science, practice, and policy in disparities research; and the NIH Health Disparities Seminar Series, a forum for researchers from NIH and other federal agencies to identify research gaps, advances, and emerging issues in health disparities research.

The Friends of NIMHD understand the difficult budget environment and appreciate your continued support for investments in health research, specifically health research targeted at improving minority health and reducing health disparities. As demonstrated by the examples outlined above and many more projects supported by NIMHD, the funds appropriated by Congress are making a difference in the lives of Americans across the nation. Continued success in eliminating disparities, however, is contingent upon continued investment in the Institute.

We thank you for your consideration of our request and look forward to helping you promote the important work that is done at NIMHD. Please contact Lindsey Horan at 202.292.6718 or [lindsey.horan@academyhealth.org](mailto:lindsey.horan@academyhealth.org) with any questions about this letter or to request more information.
