March 11, 2016

To Members of the House and the Senate Appropriations Subcommittee on Labor-HHS

The member organizations of the NHLBI Constituency Group thank you for the significant funding increase for the National Institutes of Health during the FY 2016 congressional appropriations process. We urge you to include in the FY 2017 Labor-HHS-Education Appropriation bill at least $34.5 billion for the National Institutes of Health and provide $3.4 billion for NIH’s National Heart, Lung, and Blood Institute.

A funding level of this amount would allow the NIH to continue to restore its purchasing power. Despite the FY 2016 funding increase for NIH, the agency’s purchasing power is 19% less than in FY 2003 (constant 2015 dollars). An FY 2017 appropriation of at least $34.5 billion for the NIH, including $3.4 billion for NHLBI would permit the NIH to capitalize on its ability to enhance health, create jobs, boost economic growth and innovation and promote science. Stable and sustained funding will help secure a solid return on Congress’ investment in the NIH.

The NHLBI has a long history of achievements in improving the health of your constituents. Over the past 68 years, the NHLBI has made important progress in the treatment and prevention of heart disease, stroke, asthma, emphysema, sickle cell disease, Cooley’s anemia, diabetes, sleep disorders and other diseases. However, challenges remain because heart, lung, blood, and blood vessel diseases account for more than 40% of all deaths in the United States. These diseases kill more than 1 million Americans each year and cost our nation an estimated $441 billion in medical expenses and lost productivity in 2012-2013.

As the worldwide leader in research on heart, lung, blood, and blood vessel diseases as well as sleep disorders, the NHLBI effectively translates research results to the American public. An FY 2017 appropriation of $3.4 billion for the NHLBI would allow the Institute to enhance current programs and pursue promising planned innovative basic, clinical, translational, and prevention research initiatives to better diagnose, treat and prevent these diseases.

A number of breakthroughs are on the horizon for heart, lung, blood, and blood vessel diseases as well as sleep disorders. Now is the time to invest in research to combat these diseases. Thank you.

Sincerely,

The NHLBI Constituency Group
