The Honorable Jim Nussle
Director
Office of Management and Budget
725 17th Street, NW
Washington, DC 20503

Dear Mr. Secretary and Director Nussle:

On behalf of the Friends of VA Medical Care and Health Research (FOVA), we write to recommend that the Administration include in the FY 2010 budget proposal a new funding line designated for VA research infrastructure. FOVA was founded 20 years ago to ensure that America's veterans receive high-quality health care. Today, FOVA is a diverse coalition representing more than 90 national academic, medical, and scientific societies; voluntary health and patient advocacy groups; and veteran-focused associations.

A state-of-the-art environment for research promotes excellence in science as well as teaching and patient care. It also helps VA recruit and retain the best and brightest clinician scientists that care for our nation's veterans. However, many VA facilities have run out of adequate research space. In May 2004, then-Secretary of Veterans Affairs Anthony J. Principi approved the Capital Asset Realignment for Enhanced Services (CARES) Commission's report to upgrade and renovate VA facilities. While this panel found need for \$87 million to renovate existing research space, it was not included in the Secretary's final report.

Over the past decade, only \$50 million has been spent on VA research construction or renovation at only 24 of the 97 major VA research sites across the nation. Ventilation, electrical supply, and plumbing appear frequently on lists of needed upgrades along with space reconfiguration. In House Report 109-95 accompanying the FY 2006 VA appropriations, the House Appropriations Committee expressed concern that "equipment and facilities to support the research program may be lacking and that some mechanism is necessary to ensure the Department's research facilities remain competitive."

A significant cause of research infrastructure's neglect is that there is no direct funding line for research facilities. The VA Medical and Prosthetic Research appropriation does not include funding for construction, renovation, or maintenance of research facilities. VA researchers must rely on their local facility management to repair, upgrade, and replace research facilities and capital equipment associated with VA's research laboratories. As a result, VA research competes with other medical facility direct patient care needs (such as medical services infrastructure, capital equipment upgrades and replacements, and other maintenance needs) for funds provided under either the Major Medical Facility or Minor Construction appropriations accounts.

FOVA

In FY 2008, the VA Office of Research and Development initiated a three-year examination of all VA research infrastructure for physical condition, capacity for current research, as well as program growth and sustainability of the space to conduct research. VA has already completed a number of comprehensive site surveys and plans to conduct two surveys per month until the project's completion.

FOVA anticipates VA's analysis will validate the need for significant new funding to address the declining infrastructure of VA research facilities. To address this shortfall, FOVA recommends the Administration propose a new appropriations account in the FY 2010 budget to independently define and separate VA research infrastructure funding needs from needs related to direct VA medical care. This revision should empower VA to address research facility needs without interfering with direct care infrastructure. Thank you in advance for your consideration.

Sincerely,

The FOVA Executive Committee and the 2008 FOVA membership
